Chrome Ci Global Maximum Return Feeder Fund

INVESTMENT OBJECTIVE AND STRATEGY

31 August 2024

The Chrome Ci Global Maximum Return Feeder Fund is a Feeder Fund. The investment objective of the portfolio is to provide long term capital growth in excess of G7 inflation plus 4%, by providing investors with exposure to an international collective investment scheme portfolio comprising of a diversified mix of global exposure to various asset classes. The Global Maximum Return Fund, the target portfolio, is aimed at investors who can tolerate higher risk, as explained only by volatility, as it invests offshore with a minimum of 40% exposure to equities, either directly or indirectly through units and/or shares of underlying funds. The Fund may invest in derivatives for the exclusive purpose of hedging exchange rate risk to which assets are directly exposed.

FAIS Conflict of Interest Disclosure

The annual service fee includes a fee of 0.200% (Class A) or 0.225% (Class G) payable to Chrome and a fee of 0.200% (Class A) or 0.225% (Class G) payable to Analytics Consulting, exclusive of VAT. Please note that in most cases where the Financial Services Provider (FSP) is a related party to the portfolio manager, the FSP/distributor may earn additional fees other than those charged by the portfolio manager. It is the FSP's responsibility to disclose such additional fees to the investor. Chrome aggregates all foreign investments within the Chrome Global Wealth Solutions Global Maximum Return Fund. Chrome Global Wealth Solutions and SIP may earn an annual investment advisory fee of up to 0.40% on this investment. Chrome does not charge any annual management fee in South Africa against the value of any investments that are placed in any of the Chrome Global Wealth Solutions offshore portfolios.

Characteristics

The fund invests in a global multi-asset flexible portfolio, aimed at outperforming G7 Inflation plus 4% over the long term. The portfolio may have a maximum equity exposure of up to 100% at all times, and is suitable for investors who are prepared to accept a high level of volatility in seeking long term growth. Investors in this fund should be willing to accept a higher calculated risk.
A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges, which could result in a higher fee structure for the feeder fund.

Risk Reward Profile: High

Typically, the lower the risk, the lower the potential return and the higher the risk, the higher the potential return. There is no guarantee that returns will be higher when investing in a portfolio with a higher risk profile. The risk profile for this portfolio is rated as high, as it may invest up to 100% in equity securities.

RISK DEFINITIONS

Market Risk

Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment which will also affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Currency Risk / Foreign Exchange Risk

This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Concentration Risk

Unit Trusts pool the assets of many investors and use the proceeds to buy a portfolio of securities. There are regulations in place which limit the amount that a unit trust may invest in securities, thereby spreading the risk across securities, asset classes and companies.

Liquidity Risk

This relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

Credit Risk

Credit risk arises where an issuer of a non-equity security or a swap is unable to make interest payments or to repay capital. The portfolio may be exposed to credit risk on the counterparties in relation to instruments such as cash, bonds and swaps that are not traded on a recognised exchange. The possibility of the insolvency, bankruptcy or default of a counterparty with which the portfolio trades such instruments, could result in losses to the portfolio.

Inflation Risk

The risk of potential loss in the purchasing power of your investment due to a general increase of consumer prices.

Political Risk

The risk that investment returns could suffer as a result of a country's political changes or instability in the country. Instability could come from changes in the country's government, policy makers or military.

Tax Risk

This risk relates to any change to tax laws or to the interpretation of existing tax laws which has an impact on the manner in which unit trusts are taxed.

Compliance Risk

This refers to the risk of not complying with the legislation, regulations, prescribed investment limits and internal policies and procedures by the manager or the portfolio manager.

This document is not intended to address the personal circumstances of any Financial Services Provider's (FSP's) client nor is it a risk analysis or examination of any client's financial needs. Collective Investment Schemes in Securities ("CIS") are generally medium to long terms investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this portfolio and are subject to different fees and charges. A schedule of fees and charges is available on request from Ci. Ci does not provide any guarantee either with respect to the capital or the return of the portfolio. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. The portfolio may be closed from time to time in order to manage it more efficiently in accordance with its mandate. The Chrome portfolios are portfolios established and administered by Ci, and Chrome has been appointed to manage and market the portfolios. Chrome is an indirect shareholder of Ci. As a shareholder, Chrome may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by Ci from the Chrome portfolios, and from any other Ci portfolios. Ci retains full legal responsibility for this co-named portfolio. Additional information on the portfolio may be obtained, free of charge, directly from Ci. Ci is a Non-Voting (Ordinary) Member of the Association for Savings & Investment SA (ASISA).
The one-year Total Expense Ratios are 1.09% for class A, 1.20% for class G calculated over a 12-month period to 30 Jun 2024, Ci's last financial year end.
Total Expense Ratio (TER): The above TER % has been annualised and indicates the percentage of the value of the portfolio which was incurred as expenses relating to the administration of the portfolio over the rolling 3 year period or since fund inception, on an annualised basis. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER's cannot be regarded as an indication of future TER's.
Transaction Cost (TC): The above TC % has been annualised and indicates the percentage of the value of the portfolio which was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of portfolio, investment decisions of the investment manager and the TER. Total Investment Charge is the TER plus TC which indicates the percentage of the value of the portfolio which was incurred as costs relating to the investment of the portfolio. A FX fee of up to 0.05% (incl. VAT) on any FX transactions may be payable to Chrome in addition to the annual fees referred to above.
Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year. Performance is calculated for the portfolio and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
