FUND MANAGER'S COMMENTARY

The Investhouse Ci Cautious Fund delivered 0.48% for March and 10.76% over 12 months. Global stock markets have had a great start to the year, with the best opening quarter in five years. March was particularly good, with all regions experiencing growth. Europe led the way with an impressive 3.5% increase, thanks to favourable inflation figures and an optimistic macroeconomic outlook. The US economy remained resilient, which meant rate cuts were delayed, and inflation figures were higher than expected in January and February. Meanwhile, Asian and Emerging Markets regions also saw positive returns, with China's equities bouncing back and offsetting some negative reports from larger companies like Alibaba. South African stocks experienced a significant recovery, driven by a stronger Rand and rallying resources. However, this resurgence is likely due to factors outside the country, as data suggests an increase in productivity in China's manufacturing sector. On the local front, bonds sold off, leading to their highest yield in over five months. The South African Reserve Bank kept the repo rate unchanged, citing risks from higher food and fuel prices. Nonetheless, the country's economy avoided a recession, with growth expected to accelerate in 2024. Overall, within the fund's equity allocation, the preference for global equities over local equities remains, given the better relative economic growth outlook for global economics. For March the global equity exposure has been one of the largest contributors to the fund's performance.

CHARACTERISTICS

This is a multi-asset low equity portfolio which means that it may invest in a spectrum of equity, bond, property and money market and tends to display reduced short term volatility and aims for long term capital growth. The portfolio may have a maximum equity exposure of up to 40% and complies with the regulation governing retirement funds. This portfolio may, at the discretion of the portfolio manager, invest up to 45% of the assets outside of South Africa.

RISK DEFINITIONS

Market Risk

Equity markets are volatile and the price of equities fluctuate based on a number of factors such as changes in the economic climate, general movements in interest rates and the political and social environment which will also affect the value of the securities held in the unit trust, thereby affecting the overall value of the unit trust.

Structured Deposit Risk

Structured deposits are unlisted instruments issued by a bank to provide a return linked to a specific index. The value of the instrument is partly linked to the performance of the basket of assets per the index, with a capital guarantee, and will fluctuate daily in line with the performance of the basket of assets.

Credit Risk

Credit risk arises where an issuer of a non-equity security or a swap is unable to make interest payments or repay capital. The Fund may be exposed to credit risk on the counterparties in relation to instruments such as cash, bonds and swaps that aren't traded on a recognised exchange. The possibility of the insolvency, bankruptcy or default of a counterparty with which the Fund trades such instruments, could result in losses to the Fund.

RISK REWARD PROFILE: LOW

Typically, the lower the risk, the lower the potential return and the higher the risk, the higher the potential return. There is no guarantee that returns will be higher when investing in a portfolio with a higher risk profile. The risk profile for this portfolio is rated as low, as it may only invest up to 40% in equity securities, both locally and abroad.

Political Risk

The risk that investment returns could suffer as a result of a country's political changes or instability in the country. Instability could come from changes in the country's government, policy makers or military.

Tax Risk

This risk relates to any change to tax laws or to the interpretation of existing tax laws which has an impact on the manner in which unit trusts are taxed.

Currency Risk / Foreign Exchange Risk

This risk is associated with investments that are denominated in foreign currencies. When the foreign currencies fluctuate against the South African Rand, the investments face currency gains or losses.

Liquidity Risk

This relates to the ability of the unit trust to trade out of a security held in the portfolio at or near to its fair value. This may impact on liquidity and in the case of foreign securities, the repatriation of funds.

This document is not intended to address the personal circumstances of any Financial Services Provider's (FSP's) client nor is it a risk analysis or examination of any client's financial needs. Collective Investment Schemes in Securities ("CIS") are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not necessarily a guide to future performance. CIS are traded at ruling prices and can engage in borrowing and scrip lending. Different classes of units apply to this portfolio and are subject to different fees and charges. A schedule of fees and charges is available on request from Ci. Ci does not provide any guarantee either with respect to the capital or the return of the portfolio. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. International Investments may include additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information. Investhouse aggregates all foreign investments within the Investhouse Fund Management global portfolio. The portfolio may therefore be invested in the Investhouse Fund Management offshore portfolios from time to time. Investhouse Fund Management and SIP may earn an annual investment advisory fee of up to 1% on all such investments. The portfolio may be closed from time to time in order to manage it more efficiently in accordance with its mandate. The Investhouse portfolios are portfolios established and administered by Ci, and Investhouse has been appointed to manage and market the portfolios. Investhouse is an indirect shareholder of Ci. As an indirect shareholder, Investhouse may earn dividends from time to time and participation in any dividends may be linked to the revenue generated by Ci from the Investhouse portfolios, and from any other Ci portfolios. Ci retains full legal responsibility for this co-named portfolio. Additional information on the portfolio may be obtained, free of charge, directly from Ci. Ci is a Non-Voting (Ordinary) Member of the Association for Savings & Investment SA (ASISA). Total Expense Ratio (TER): The above TER % has been annualised and indicates the percentage of the value of the portfolio which was incurred as expenses relating to the administration of the portfolio over the rolling 3 year period or since fund inception, on an annualised basis. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER's cannot be regarded as an indication of future TER's. Transaction Cost (TC): The above TC % has been annualised and indicates the percentage of the value of the portfolio which was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of portfolio, investment decisions of the investment manager and the TER. Total Investment Charge is the TER plus TC which indicates the percentage of the value of the portfolio which was incurred as costs relating to the investment of the portfolio. A FX fee of up to 0.05% (incl. VAT) on any FX transactions may be payable to Investhouse in addition to the annual fees referred to above. Performance quoted is for lump sum investment with income distributions, prior to deduction of applicable taxes, included. NAV to NAV figures have been used. The annualised return is the return of the performance period re-scaled to a period of one year.

Performance is calculated for the portfolio and individual investor performance may differ as a result of initial fees, actual investment date, date of reinvestment and dividend withholding tax.
